Sieve Applications

Sieving is a reliable technique for determining particle size and shape, important factors in the quality of many products in a number of industries including diamond powder / abrasives. Precision Eforming produces electroformed sieves for use in sorting, sifting, screening and classifying a variety of materials. Our sieves are precise instruments and are widely used in manufacturing applications, as well as laboratory environments.

Electroformed sieves offer a number of advantages. The largest advantage is the achievable holesizes. We currently produce sieves within the ranging from 3 to 2000 microns, with a +/-2 tolerance. Sieves with holesizes less than three microns will be available in the upcoming months. They are not subject to the limitations of woven wire sieves such as clogging, particle entrapment and imprecise tolerances. In addition, their flat, smooth surface simplifies cleaning. Our standard apertures are square, round and slotted, and we have the ability to produce customer geometries.

Our sieves are currently used in a variety of applications and industries including: chemicals, textiles, pharmaceuticals, powder metals, diamond powder, abrasive, cement and nuclear fuel production.

Sieve Compatibility and Versatility

The sieves and sieving material can be used in any application compatible with pure nickel material. They are a direct replacement for any woven material and offer unparalleled versatility in design and function.

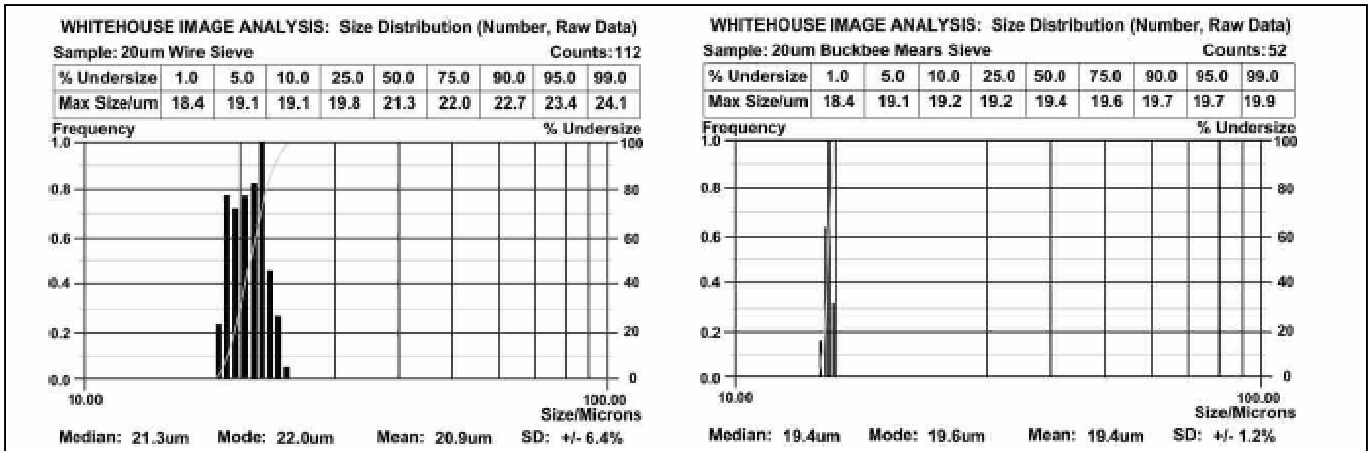

- Our sieves can be produced in any standard diameter and custom produced to your requirements
- They are interchangeable with any woven material
- They can be used with all equipment (vibratory shakers, sonic shakers, WS Tyler Ro-TapR, shaker, etc.)
- They can be used with any style ultra-sonic separating equipment (Single / multi layered framed sonic sifters)
- The sieve material custom mounted to a variety of materials (Aluminum, stainless, etc)

Precision Sieve / Sieve Materials

Precision Eforming offers a wide range of Sieve and Sieve Material Products. Manufactured using precision electroformed techniques, our product is a perfectly flat material which aids in eliminating particle entrapment. Our products / configurations include:

	Standard Sieves	Ultra Precision Sieves	Sheet Material
Aperture Range	3um - 2000 at single um increments	2um - 500 at single um increments	3um - 2000 at the single increment
Material	Electroformed Nickel	Electroformed Nickel	Electroformed Nickel
Standards	ASTM E-161 ISO 3310-3	ASTM E-161 ISO 3310-1	ASTM E-161 ISO 3310-1
Tolerance	+/- 2um	+/- 1.5um	+/- 2um
Aperture	Square Round Slotted Custom	Square Round Slotted Custom	Square Round Slotted Custom
Rim Sizes	3, 8, 12" SS 75, 100, 200mm SS 3" Acrylic	3, 8" SS 75, 100, 200mm SS 3" Acrylic	Up to 29" Sheets
Support Grid	Various Sizes of square SS Also available unsupported	Various Sizes of square SS Also available unsupported	Various Sizes of square SS Also available unsupported

Comparison of Woven Wire Materials vs Electroformed Materials

Comparison of aperture hole size of 20um wire (left) and electroformed sieves (right) ***

Microscope comparison of 20um wire (left) and electroformed sieves (right) ***
